

HA450

Automatic Dispenser

The machine that never lets you down

Ultra low maintenance

The HA450 is the ideal solution for DIY stores and for medium-sized retail and service centres, and is compatible with different kinds of colorant systems.

The machine has been designed for optimal ergonomics and to practically eliminate the need for maintenance altogether, through special features such as:

- The Easy Brush System which requires minimal operator activity
- The low front edge of the HA450 which makes refilling easy

Fast sequential dispensing

The HA450 with High Speed Package delivers a **dispense time reduction of up to 40%** compared to existing sequential systems on the market.

The High Speed Package, in combination with the right pump size (1, 2, 5 or 10 fl. oz.) and the right turntable configuration, optimizes the performance of the machine. Shot sizes down to as low as 1/576 fl. oz. guarantee accuracy. A dispensing speed of up to 2l per min can be obtained

Speed combined with reliable Harbil technology results in an ultra low TCO.

Customize to your needs

The machine can be equipped with 16 to 32 canisters (36 pump positions) from 2 to 10l, either polymeric or stainless steel. It has an electric cantable as standard.

The dispenser is available in different heights for optimal ergonomics.

Table configurations, machine colors, stickering and many other options enable us to customize the HA450 to meet your needs.
