

Shaker

Skandex 450 [SK450]

PRODUCT INFORMATION

- Up to 35 kg
- Space saving sliding door
- Programmable, variable speed
- Auto adjustment to power grid
- Automatic can detection

The SK450 is the successor of the well known SO400 shaker and can handle containers up to 35kg, including oval and square shaped products. Its flexible clamping mechanism ensures that the right pressure is applied for both small and large cans.

The timer can be customized to your specific needs by using the electronic display or by using the optional ShakeTimeManager© pc software. It allows you to easily set a shake program (including variable speeds) on the three timer buttons.

Another feature of the SK450 is its built-in power grid adjustment: the shaker will automatically adjust to the local power supply, so no more need to order equipment specifically for the various regions.

With its enhanced features the SK450 is the ideal shaker for locations with a medium to high paint turnover.
