TECHNICAL GUIDANCE

Minute flow rate measuring and transmitting with flameproof

MA-920 Series

INTELLIGENT, PURE ELECTRONICS MICRO FLOWMETER

OUTLINE

MA-920 MICRO FLOWMETER is a metal tube variable area flowmeter which has local indication with transmitting of minute flow rate of liquids and gases.

TOKYO KEISO's long time production know-how and recent electronics technology have been successfully combined.

The existing micro flowmeters generally need a signal linearizer due to mechanical problem of very minute sensing part. In **MA-920**, integrated microprocessor takes care of these automatic compensation based on individual stored calibration data and achieves high accuracy even for small flow rate.

The 4 to 20 mA with 2-wire system makes field wiring easier.

FEATURES

- Covers very low flow rates of 0.6 to 3 L/h
- 2-wire 4~20mA DC output
- Magnetic field sensor detects the float movement with electronics to eliminate hysteresis.
 - High accuracy and repeatability have been achieved.
- Easy- to- read digital LED display
- No liquid dampers are needed even for gas measurement applications
- Ex d IIC T6 flameproof construction suitable even for Hydrogen atmosphere

■ MAIN APPLICATIONS

Small flow measurement, transmitting and control for

- Liquid chemical injection and feed
- Gas injection and feed
- Various services for test plant and pilot plant
- Assembling onto various devices and equipment

■ OPERATING PRINCIPLE

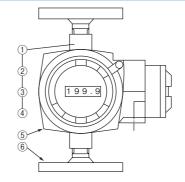

As shown in figure below a magnet with vertical polarity is molded in the float. Float moves vertically in response to the flow rate of fluid. An oval shaped magnetic field exists between N pole and S pole of the magnet. Two magnetic field sensors whose sensitivities are designed equal are located at 90° angle, close to the tapered tube. These 2 sensors generate output signal which corresponds to the strength of magnetic field and its angle. By differential data processing of these outputs from 2 sensors, the angle of magnetic field which represents the position of float is obtained. Thus, the flow rate of fluid can be calculated from the position of float.

MATERIAL CONSTRUCTION

| No. | Part Name | Material |
|-----|---------------------------|----------------------------|
| 1 | Body | SCS14 |
| 2 | Tapered tube | SUS316 |
| 3 | Float | SUS316 *1 |
| 4 | Packing | PTFE ^{*2} |
| 5 | Indicator/ Transmitter | ADC12 |
| 6 | Fittings | SUS304 (std.) or SUS316 *3 |

*1: PPS resin / Titanium will be used for 1/2" meter size, and PPS resin / SUS316 will be used for 3/4 and 1" meter sizes in gas measurement applications.

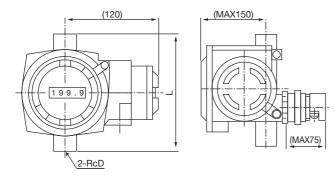

*2: Packing is not an external pressure part.

*3: Materials of flange and connection fitting can be selected. Specify them when ordering.

ORDERING FORM

Specify the following for order / inquiry ;

| MODEL CODE | MA-92 |
|---------------------|----------------------------|
| FLUID NAME | |
| DENSITY | |
| VISCOSITY | mPa*s |
| PRESS. | MPa 🗆 |
| TEMP. | O°C |
| MEASURING RANGE | L/h 🛛 L/h (nor) 🗌 |
| CONNECTION SIZE | mm □ |
| CONNECTION STANDARD | □ Rc □ JIS10KFF □ |
| MATERIAL | Standard Special (Specify) |

SPECIAL INSTRUCTION IF ANY;

Magnet Strainer

The strainer installed at upstream eliminates particles in the fluid.

Select a proper mesh of the filter adequate for the size of particles.

A magnet is molded in the float and in case ferrous powder are involved in the fluid, smooth movement of float will not be obtained.

It is recommended to install

a Magnet Strainer in upstream of the line to eliminate the ferrous contents.
